

Color Grading in DaVinci Resolve 11/12

1. Creating a Database*

- Getting Started
- The Log In Window
- Resolves Database Architecture
- The Database Manager
- Creating a Database
- Choosing a Database Type
- Updating a Database
- Backing up a Database
- Resolve 12 Changes to the Database Manager and Users
- Resolve vs Resolve Studio
- Enabling Multi-User Login
- Managing Databases
- Searching the Project Manager

2. Creating Users

- Database/User Hierarchy
- Admin & Guest Users
- Creating a User
- Logging In
- The Project Manager
- Project Folders
- Creating Project Folders
- Moving Projects Between Folders
- Show/Hide Group Projects
- Deleting Projects
- Exporting Projects
- Importing Projects
- Creating & Opening Untitled Projects
- Creating a New Project

3. Setting Up Your Project

- The Preferences Panel
- System Overview
- Media Storage Options
- Video I/O and GPU Options
- Control Panel Options

- Advanced Options

4. Project Settings*

- Project Settings Overview
- Project Settings Options
- General Options
- Setting up Cache Frames
- Autosave
- Keyboard Mapping
- Setting Timeline Resolution
- Video Monitoring Options
- Conform Options
- Mixed Frame Rate Options
- Project Setting Presets

5. Quick Tour of the Resolve UI*

- Resolve 12 Changes to the User Interface
- User Interface Changes
- The UI Toolbar
- Responsive UI
- Project Manager and Settings Button
- Changes to the Project Settings Window
- Menu Changes
- The Workspace Menu

6. Dailies Workflow Example*

- Importing Media
- Adding Clips to the Timeline
- Creating Multiple Timelines
- Color Grading all Timeline Clips
- Adding a Data Burn In
- Rendering Media for Delivery
- Resolve 12 Changes to the Media Page
- New Favorites Panel
- Adding Media to Favorites
- Removing Items from Favorites
- Smart Bins

7. Importing, Relinking, & Scene Detection

- Re-Linking Media in an Existing Project

- Automatically Re-Linking Media from XML
- Manually Relinking Media
- Importing with Scene Detect
- Eliminating False Scene Cuts
- Marker 31

8. Understanding the Color Page*

- The Viewer
- The Gallery Pane
- The Node Editor
- Color Page Controls & Palettes
- The Keyframe Editor
- The Color Page Timeline
- Changing the Timeline Thumbnails
- Clip & System Information
- Clip Details
- Markers in the Timeline
- Flagging Clips
- Resolve 12 Changes to the Color Page
- UI Toolbar
- New Viewing Modes
- Enhanced Viewing Mode
- Toggle Display Mode
- Simplified User Layouts
- The Info Palette
- Viewing Mode Button Options
- Color Wheel Palette Changes
- Mini Timeline Changes
- Toolbar Changes and Relocations
- Filtering Control Locations

9. Filtering & Sorting the Thumbnail Timeline

- Filtering the Thumbnail Timeline
- Filtering to Show Flagged Clips
- Filtering Graded & Ungraded Clips
- Other Filtering Options
- Sorting by A Mode and C Mode

10. Badges

- Tracking Badges
- Version Badges

- Switching from Version to Format Display

11. Working with your Project in Lightbox Mode

- Grouping Clips Together
- Color Grading Within the Lightbox
- Using Undo and Redo

12. Color Page Controls - Part 1

- Player Controls on the Color Page Player
- Using the Timecode Displays
- Showing Handles with the Unmix Control
- Showing Handles with the View Option

13. Color Page Controls - Part 2

- The Eyedropper Tool
- Displaying and Hiding the Power Window
- Changing the Display Mode
- Using the Highlight Modes
- Timeline Selector

14. Color Page Controls - Part 3

- Customizing the Color Page
- Toggling Display Mode in the Node Editor
- Resizing the UI Panels
- Using the Memory Slots
- Switching to the Mini-Timeline
- Expanding the Keyframe Editor
- Showing the Album List
- Gallery Display Options
- Enhanced, Full Screen, and Cinema Viewer Modes
- Keyboard Shortcuts for the Viewers
- Resetting the UI Layout
- Enabling Dual Screen Layouts
- Minimizing to a Window Frame

15. Color Page Controls - Part 4

- Showing Scopes
- Scopes Overview
- Customizing the Scopes

16. Grading Techniques

- The Node Editor
- Adjusting the Node Editor
- Understanding Node Trees

17. Adjusting Contrast - Part 1

- Showing the Video Scopes
- The Color Wheels & Primaries Palette
- The Offset Control
- Using RGB Contrast Controls
- Adjusting the Y (Luma) Channel
- Resetting Specific Adjustments

18. Adjusting Contrast - Part 2

- Contrast Control vs RGB Contrast Controls
- The Pivot Control
- Corresponding Controls on a Control Surface

19. Adjusting Contrast - Part 3*

- The Gamma Adjustment (TOD Adjustment)
- Using the Curves
- Ganged Curves
- The Limitations of Curves
- Recommended Workflow
- Manipulating Curves Using a DaVinci Control Surface
- Fixing Un-Ganged Curves

20. Making Color Balance Adjustments - Part 1

- Adjusting Color Before Contrast
- The Color Wheel Palette
- Using the Offset Color Wheel
- Understanding the Effects of the Color Wheels
- Making Practical Adjustments with the Color Wheels
- Adjusting Color with a Modifier Key
- Making Single Control Adjustments
- Combining Color Controls
- Understanding the Link between Primaries & Color Wheels
- Adjusting Primaries with a Control Surface
- Using the Primaries RGB Controls

21. Making Color Balance Adjustments - Part 2

- Making a Neutral Grade
- Warming up Your Shot
- Disabling Your Grade
- YRGB Processing
- Using the Lum Mix Control
- Changing the Default Lum Mix Amount
- The Automatic Color Balance Control
- Changing Control Panel Settings

22. Matching Color Balance

- Using the Hue Control
- Making a Secondary Adjustment with Hue
- The Primaries Offset
- Changing Printer Point Settings

23. Log Color Grading

- What is Log
- Using LUTs
- How LUTs Affect a Node
- Using the Log Controls
- The Log Offset Control
- Grading Log Footage

24. Grading Log Footage Without LUTs

- Creating Your own Contrast Adjustment
- Creating an S Curve
- Adjusting Color with the Log Controls

25. Using Log Controls on Non-Log Footage

- Using Log Controls Stylistically
- Performing Targeted Adjustments

26. The RGB Mixer

- Correcting Color with the RGB Sliders
- Color Channel Switching
- Using the Monochrome Setting in the RGB Mixer
- Turning Off Preserve Luminance

- Fixing an Isolated Section of an Image

27. Working with Camera Raw Media

- Adding Camera Raw Footage to Your Project
- Debayering Your Footage
- Choosing CinemaDNG Settings
- Debayering Red
- Overriding Debayer Settings on Individual Clips
- Working in the Camera Raw Palette
- Saving Raw Settings to Different Versions
- Copying Camera Raw Settings to Other Clips
- Camera Raw Setting in Relation to the Node Tree

28. Working in the Color Match Palette

- Choosing Different Color Charts
- Changing the Default Handle Length
- Sampling Color Charts
- Choosing Your Color Match Settings
- Color Match Adjustments
- Using the Target Color Temp Control
- Sharpening and Softening with the Color Match Palette

29. The Curve Palette*

- Gigantor Mode in the Curves Palette
- Extra Controls with a Control Surface
- Using the Curves to Correct Color
- Deleting Points and Resetting Curves
- Understanding Lum Mix with Curves
- Locking Curves in Place
- Adjusting a Tonal Range with the Curves
- Using the Curves Intensity Slider

30. The YS Effect Sliders*

- Inverting Your Shots with the YS Effect Sliders
- Adding Nodes for Secondary Correction with Curves
- Resolve 12 Changes to the Curves Palette
- White and Black Point Adjustment
- Adjusting Color Channels
- Working with Unified Channels
- Copying One Channel to Another

- Viewing a Reference Curve
- Working with Editable Splines
- Working with Preset Curve Points
- Soft Clip Control Changes
- Other Curve Adjustment Controls

31. Soft Clipping in DaVinci

- Switching Curve Modes
- Using the Soft Clip Curve Mode
- Single Color Channel Softening
- Using the Soft Clip Curve on a Separate Node

32. Hard Clipping in DaVinci

- How DaVinci Resolve Keeps Image Data
- Things that DO Clip in DaVinci Resolve
- Hard Clipping Controls in the Soft Clip Curve
- Hard Clipping with LUTs
- Hue Curves
- Soft Clipping in the Timeline Mode

33. Adjusting Curves - Part 1

- Generating a Timeline Wide LUT
- More Curvy Goodness
- Hue vs Hue Curves
- Hue vs Sat Curves
- Auto Color Range Selectors

34. Adjusting Curves - Part 2

- Lum Vs Sat & Sat Vs Sat Curves
- Understanding the Lum Vs Sat Curve

35. Adjusting Curves - Part 3

- Sat Vs Sat Curve

36. Saturation for Broadcast

- Broadcast Safe Settings

37. Secondary Adjustments with the HLS Qualifier*

- Using the HSL Qualifier

- Color Keying with Qualifiers
- Adjusting the Width of the Hue Control
- Hue, Saturation, and Luminance Parameters
- Adjusting Low and High Parameters
- Adjusting the Soft Control
- Resolve 12 Changes to the HLS Qualifier
- Color Coded Input and Outputs
- Creating Samples with the 3D Keyer
- Using Despill to Clean up the Key
- Using a Window for a Garbage Matte
- Connecting a Key to an RGB Input & Vice Versa
- Using Curves to Improve Key

38. Fine Tuning a Qualifier Key with Matte Finesse Controls

- Quick Key vs a High Quality Key
- Matte Finesse Controls
- Using the Denoise Control
- Black Clip & White Clip Controls
- Blur Radius and In/Out Ratio
- Color Range & Softness Controls

39. Using the Different Highlight Modes

- Highlight Mode Shortcuts
- Split Screen Highlight Modes
- Using Individual Qualifiers

40. Using the Qualifier in RGB & Luma Mode

- Using the Qualifier in Luma Mode
- Luma Control: Selectively Tinting Highlights
- Luma Control: Pulling a Highlight Shadow Split

41. Using Nodes & Presets

- Connecting Outside Nodes by Key Data
- Inverting the Qualifier Key
- Using Color Presets in the Qualifier
- Isolating Color with the Presets
- Desaturating Highlights and Shadows with the Presets

42. Applying Power Windows*

- The Window Palette

- Applying a Window
- Adjusting Windows with the Transform Parameters
- Performing an Isolated Adjustment
- Inverting a Window
- Viewing the Key with the Highlight Control
- Choosing OSC View Options
- Creating Nodes with Windows
- Applying Multiple Windows to a Node
- Adjusting Multiple Window Interaction
- Resetting & Deleting Windows
- VO Reference End of lesson 43

43. Choosing the Right Power Window*

- The Linear Power Window
- The Polygonal Window
- Applying Softness to a Window
- The Power Curve Window
- Drawing a Power Curve
- Deleting & Adding Control Points
- The Gradient Power Window
- Performing Isolated Corrections with Multiple Windows
- Creating a Softness Window
- Intersecting Windows
- Combining Windows in Different Ways
- Resolve 12 Changes to the Window Palette
- Selecting Overlapping Windows
- Convert to Bezier Command

44. Tracking Power Windows*

- Ramifications of Using Windows
- Tracking a Power Window
- Creating Window Presets
- Applying Window Presets
- Adjusting a Tracked Window

45. Advanced Tracking Techniques - Part 1*

- Choosing Alternate Tracking Points
- Working Around Tracking Occlusions
- Using Interactive Mode
- Deleting Tracking Points
- Choosing How Tracking is Analyzed

- Using Frame Mode
- Resolve 12 Changes to Frame Mode
- Manipulating Keyframes

46. Advanced Tracking Techniques - Part 2*

- Using Keyframes & Tracking
- Masking Out a Tracked Shape
- Isolating Qualifications with Windows
- Tracking Multiple Windows
- Copying Track Data
- Naming Individual Windows
- Manual Tracking
- Using the Show Track Option
- Tracking With Handles
- Resolve 12 Changes to the Tracking Palette
- Perspective 3D Option
- Altering Window Placement After Track
- How the Tracker Handles Occlusions
- Working in Clip Mode
- Finessing the Track
- Clip Mode vs. Frame Mode

47. Blur Palette & Color Spaces*

- Using the Radius and H/V Ratio Controls to Affect RGB
- Changing Color Spaces in the Node Editor
- Isolating Luma in the YUV, HSL, or LAB Color Space
- Using Palette Controls on Alternate Color Channels
- Using the Curves Palette on Alternate Color Spaces
- Disabling Color Channels in Color Spaces
- Resolve 12 Changes to the Curves Palette
- Working with Unified Channels

48. Creating Effects in the Blur Palette

- Creating a Depth of Field Look
- Isolated Blurring in a Window with Tracking
- Focusing Attention with Isolated Sharpening
- Using Sharpen Mode Controls in the Blur Palette
- Controlling Sharpen Effects with Level, Coring Softness, & Scaling
- Sharpening in Mist Mode
- Using Mist to Selectively Soften
- Sharpening and Blurring with the Midtone Detail Control

49. The Motion Effects Palette

- Noise Reduction & Motion Blur Controls
- Temporal Noise Reduction
- Spatial Noise Reduction
- Reducing Noise with the Luma & Chroma Thresholds
- Using the Motion Blur Effect on Moving Objects
- Blending Noise Reduction

50. Using OpenFX in DaVinci Resolve

- The OpenFX Panel
- Adjusting OpenFX Settings on an Effect
- Using OpenFX Transitions and Generators in the Effects Library
- Limiting OpenFX with Secondary Correction Controls

51. Compositing Effects in the Color Page*

- Setting up a Composite Project in the Editing Timeline
- Keying a Green Screen
- Creating Transparency with OpenFX
- Creating Transparency with DaVinci Keying Tools
- Resolve 12 Changes to the Keyer
- Color Coded Input and Outputs
- Creating Samples with the 3D Keyer
- Using Despill to Clean up the Key
- Adding a Parallel Node
- Adding a Key Mixer Node
- Working in the Key Palette

52. Keyframing with Mattes

- Transforming External Mattes with the Key Palette

53. Using Mattes to Add Texture

- Using a Layer Mixer Node to Combine Clips
- Applying a Matte Effect to the Entire Timeline
- Color Correcting the Output of an External Matte
- Compositing a Superimposed Clip as a Layer

54. Choosing your Project Sizing Settings

- Timeline Resolution

- Pixel Aspect Ratio
- Video Monitoring
- The Image Scaling Panel
- Resize Filters
- Anti-alias Edges
- Debayer Quality

55. Sizing in DaVinci Resolve - Part 1

- Input Scaling Preset Options
- Output Scaling Preset Options
- Outputting Multiple Jobs with Different Resolution
- What DaVinci Does with Mis-Matched Resolution

56. Sizing in DaVinci Resolve - Part 2*

- Overriding the Project Scaling Settings Clip by Clip
- Relation Between the Edit Page & Color Page Sizing Controls
- The Sizing Palette in the Color Page
- Sizing Presets
- Output Sizing in the Color Page
- Blanking Controls
- Making a Widescreen Look
- The Clip Attributes Window
- Resolve 12 Changes to Blanking
- Pitch and Yaw Controls
- New Blanking Options

57. DaVinci Resolve's Stabilizer

- Using the Zoom Checkbox

58. Burning Data into the Video

- Using the Data Burn In Palette
- Saving a Custom Preset for your Window Burn
- Burning Text by Clip Instead of Project
- Window Burn Options
- Including Window Burns During Delivery

59. Comparing & Matching Split Screen*

- Resetting All Grades & Nodes
- Comparing with the Up & Down Arrows
- Comparing with Split Screen Mode

- Selected Clips Split Screen
- Adding Multiple Shots to the Split Screen
- Turning off Outline
- Neighbor Clips Split Screen
- Gallery Grades Split Screen
- Comparing Versions with Split Screen
- Resolve 12 Changes to Shot Matching
- Setting up a Match Operation
- Analyzing Shot Match in the Scopes
- Choosing a Shot to Match To
- The Goal Behind Match Shot
- Making Grade Adjustments to Matched Shots
- How Nodes & Shot Match Work Together

60. Grading Techniques in Lightbox

- Enabling Lightbox
- Matching Grades
- Filtering Clips in Lightbox
- Outputting Lightbox to Your Hero Display

61. Working with Stills - Part 1

- Saving Stills
- Turning On Image Wipe
- Different Wipe Views
- Wiping Against a Clip in the Timeline
- Wiping Against Offline Media
- Working with Stills
- Organizing Stills

62. Working with Stills - Part 2

- Importing & Exporting Stills
- Organizing with Albums
- Power Grades
- The Gallery Window
- Copying Stills Across Databases
- DaVinci Resolve Looks
- Hiding the Gallery
- Grab All Stills
- Searching for Stills

63. Navigating in the Node Editor*

- Creating Room Within the Node Editor
- Removing and Adding Nodes
- Enabling & Disabling Current Node
- Enabling & Disabling All Nodes
- Creating Node Versions
- Bypass All Grades Control
- Rearranging Nodes
- Node Numbering
- Resolve 12 Changes to the Node Editor
- Creating Compound Nodes
- Editing the Contents of a Compound Node
- Saving the Compound Effect as a Still
- Cleaning Up the Node Graph

64. Controlling Nodes

- Adjusting Node Output with the Gain Control
- Labelling Nodes
- Resetting Nodes
- Restoring Nodes by Using Original Memory
- Testing a Look with Preview Memory

65. Standard Node Structures

- 1st Node Example
- 2nd Node Example
- 3rd Node Example
- Using Nodes to Organize & Keep Adjustments Separate

66. Using Smart Cache

- Using Smart Cache
- Force Caching Clips
- Defining Cache Format
- Additional Cache Options
- Source, Node, & Sequence Caching
- Using Cached Files When Delivering
- User Defined Caching
- Deleting Render Cache

67. Additional Node Structures

- Inputs & Outputs on the Node
- Adding a Corrector Node
- Feeding a Key Forward to a Different Node
- Creating a False Skin Tone Effect
- Pre-Processing for a Cleaner Key

68. Combining & Subtracting Keys

- Combining Multiple Keys Together
- Using a Key Mixer Node to Combine Keys
- Using a Key Mixer Node to Subtract a Key
- Masking with the Input Link
- Adding Inputs to a Node

69. Using an External Matte to Feed a Key

- Adding an Outside Node to Key Outside the Matte
- Matte Node Outputs

70. Using Parallel Nodes

- Viewing Just the Selected Node with the Highlight Display
- Blending Parallel Keys

71. Using Layer Mixer Nodes

- Morphing the Parallel Node into a Layer Mixer Node
- Blending Two Nodes Together with the Layer Mixer
- Preserving Elements with the Layer Mixer

72. Splitter Combiner Node Structures

- Node Sizing
- Re-aligning Color Channels
- How Curves Work in Splitter Combiner Nodes

73. Using Node Sizing to Digitally Paint

- Using Node Sizing to Digitally Clone

74. Local & Remote Version Techniques - Part 1

- Creating a Duplicate Timeline

- Creating Grade Versions
- Local Vs Remote Version
- Local Grade Versions
- Enabling and Setting up a Master Timeline

75. Local & Remote Version Techniques - Part 2

- Using Remote Grades
- Remote Grading on Linked Clips
- Using Remote Grading Versions
- Resetting Back to Local Grades from Remote Grades

76. Local & Remote Version Techniques - Part 3

- Switching between Local & Remote Grade on a Single Clip
- Setting Remote Versions as the Default
- Copying Remote Grade Versions to Local Versions
- Duplicating a Remote Grade Version into a New Version
- Remote Version Options

77. Copying Node Settings

- Copying & Pasting Node Settings
- Copying a Piece of a Grade with Stills

78. Copying the Entire Grade

- Copying Grades with the Middle Mouse Button
- Applying Grades from Prior Clips
- Applying Grades by Right Clicking Stills
- Selectively Copy Grades with Keyframes Editor

79. Copy Grade Preserve Options

80. Append Node Graph from Stills

81. Using Memories

- Creating Memories from Saved Stills

82. Using Timeline Mode in Nodes

- Using Timeline Mode for Dailies
- Copying an Effect or Filter to the Timeline

- Timeline Node for Legalization and Highlight Protection

83. Group Grading*

- Pre-Clip Adjustments
- Post-Clip Adjustments
- Alternate Way to Group Clips Together
- Removing or Assigning a Clip to a Group
- Stills Copy Grades based on the Node Mode
- Only Clip Mode Can be Versioned
- Resolve 12 Changes to Grade Management
- Collapse Group Grades
- Saving as a Single Flat Grade
- Add Correction with Keyframes
- VFX Workflow
- Adding Corrections to Multiple Clips
- Appending Nodes to Selected Clips
- Ripple Node Change to Selected Clips
- Propagating Changes to Groups
- Deleting Unused Versions

84. Using the ColorTrace Tool

- Using ColorTrace from the Timeline
- Manually Using ColorTrace with Timelines

85. Keyframing in DaVinci Resolve

- The Keyframes Editor
- Adding Keyframes
- The Dissolve Type Window

86. Multiple Keyframe Tracks

- Keyframing Sub Tracks

87. Dynamic Keyframes

- Keyframing a Color Change
- Adjusting Keyframes

88. Static Keyframes*

- Static Key Frames
- Color Correcting Shots with Static Keyframes

- Animating In Between Static Keyframes
- Rotoscoping with Keyframes
- Resolve 12 Changes to Frame Mode
- Manipulating Keyframes

89. Delivering Your Movie - Part 1

- Exploring the Deliver Page UI
- Basic Render Settings Options
- The REnde Queue
- Selective Track Output
- Selective Clip Rendering
- Setting a Range for Output
- Using Render Presets
- Video Render Options - Format, Codec & Resolution
- Outputting Multiple Resolutions
- Frame Rate Restrictions

90. Delivering Your Movie - Part 2

- Audio Render Options
- Choosing Audio Channels for Output
- Remapping Audio Channels
- Outputting Same as Source
- File Naming Options
- Choosing a File Location
- Managing the Render Queue
- Re-Rendering a Job
- Selecting Specific Jobs to Render

91. Delivering Your Movie - Part 3

- Exporting Intermediate Render Options
- Video Data Rate Options
- Data Burn in Options
- Rendering Unique File Names
- Disable Edit & Input Sizing
- Enable Flat Pass
- Additional Outputs
- Exploring Advanced Options
